YAKABOD CYBER INCIDENT MANAGER

SEPARATE + SECURE YOUR CYBERSECURITY INCIDENTS & RESPONSE.

PURPOSE-BUILT TO MANAGE CYBERSECURITY INCIDENTS

Organizations must manage more cybersecurity incidents than ever before. Without specialized capabilities to handle their caseload, CISOs and their teams are forced to rely on general-purpose incident management software or spreadsheets that can make their organizations even more vulnerable to attacks.

MOVE QUICKLY & SAFELY, FROM MANAGEMENT TO RESPONSE

You can't compromise on speed or security. The Cyber Incident Manager organizes all incident documentation and communication in one encrypted, searchable, and visual platform. So you can effectively isolate and respond to threats, while keeping senior leaders informed.

◆ Comprehensive, NIST-based data collection.

◆ Streamlined IR workflows with notifications.

◆ Secure in-app messaging and collaboration.

◆ Built-in dashboards for volume, type, and more.

KEEP EVERY INCIDENT UNDER LOCK & KEY

Remove any opportunity for unauthorized users to view or access sensitive data. The Cyber Incident Manager provides complete isolation and protection for confidential data, documents and conversations. Granular access controls, encryption and out-of-band communication help you keep every detail about incidents on a need-to-know basis.
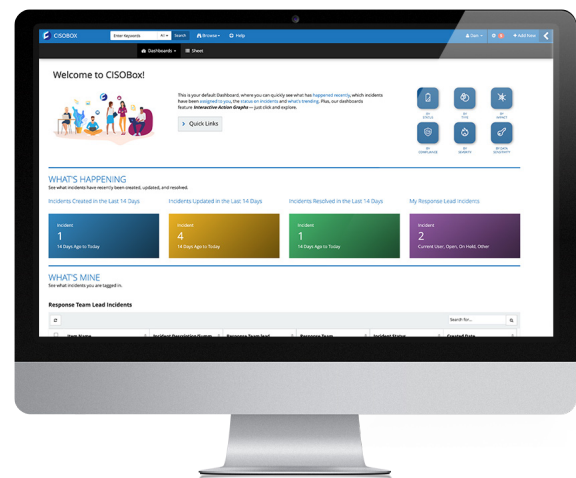

Yakabod's Cyber Incident Manager is the only solution designed for secure cybersecurity incident response.

KEEP YOUR ORGANIZATION SAFER THAN EVER

Yakabod's Cyber Incident Manager integrates a robust suite of security features designed for the most rigorous use cases. Enforce confidentiality and integrity throughout the incident response lifecycle. Protect incident data and communication from attackers and insiders.

ACCESS CONTROLS

Control access to every incident **+** file

Manage role-based permissions

Enforce organizational policies for privacy **+** security

SECURITY

Separate security incidents from IT support tickets

Store incident data in a hardened software appliance

Encrypt incident data at rest **+** in transit

COMPLIANCE

Drive incident data collection based on NIST 800-61r2

Standardize response processes with minimal oversight

Create a system-of-record with audit trails

GIVE CYBER INCIDENTS THE ATTENTION THEY DESERVE

Your incident management system should make incident response work easier, not get in the way. Yakabod Cyber Incident Manager features best-in-class functionality to help you respond effectively and efficiently to any attack or threat—from phishing, to malware, to insider risks.

IMPLEMENT BEST PRACTICES FOR HANDLING YOUR CYBER INCIDENTS

Our products manage cases and classified data for US Federal Intelligence Agencies. Now you can use the same technology to protect your sensitive incident data and incident-response communications while implementing NIST, ISACA and other best practices.
